EDUCATION

Engineer in Computer Science

Opole University of Technology

2012 – 2016

Erasmus Exchange

Instituto Politécnico de Bragança

Portugal · 2013 – 2014

CERTIFICATIONS

Microsoft Certified: Azure Fundamentals

Sept 2024 · ID: 68F6C600621CAC50

PROFILE

10 years of full-stack .NET across oil & gas, logistics, warehousing and financial services. Founded an engineering branch from zero, grew it to **5 people**, and architected a logistics platform for Darling Ingredients from event storming through to production. Experienced technical liaison who translates client requirements directly into architecture decisions.

WORK EXPERIENCE

Senior Software Engineer

Sept 2024 – Present

Yameo · Gdańsk, Poland

- Contributing to **StockTrack** - offshore energy supply chain platform handling vessel operations, real-time asset tracking, stock trades and analytics; deployed on Azure AKS with Jenkins CI/CD.

– Serving as **primary technical liaison to energy sector clients** - translating business requirements directly into architecture decisions in a full-ownership model with no intermediary PM layer.

– Delivered a Blazor-based internal tooling application, expanding team frontend capability beyond the primary Angular stack.

– Modernized the team’s BDD workflow using **Claude** and **superpowers** to accelerate **SpecFlow** step generation.

Team Lead Software Developer

Nov 2018 – Sept 2024

Porta Capena Sp. z o.o. · Opole, Poland

- Founded Porta Capena’s Opole branch from zero - hired and onboarded **5 engineers**, defined technical standards and workflows, growing it into the company’s primary delivery unit.

– Served as architect and initial product owner on **Nexus** (logistics platform for Ecoson / Darling Ingredients) - applied DDD across **3** modules, delivered in **3 years** on schedule and within budget.

– Owned Azure DevOps end-to-end: CI/CD pipelines, boards, App Center deployments, and cloud infrastructure across multiple active projects simultaneously.

– Defined team standards for testing (xUnit, integration coverage, mandatory code review) and observability (Serilog/Seq, Application Insights) - became the delivery quality baseline.

– Mentored **3 junior developers** to mid-level; applied DDD, CQRS and event-driven patterns; facilitated event storming sessions to align engineering with stakeholders.

Software Developer

March 2016 – Nov 2018

Porta Capena Sp. z o.o. · Wrocław, Poland

- Delivered across **multiple concurrent projects** spanning IoT energy (**Enetic**), energy analytics (**Ecoscada**), procedure management for smart glasses (**Proceedix**), and logistics - consistently assigned to the highest-complexity cross-technology work.

– Led frontend migration from MVC Razor to Angular on two projects, introducing component-based architecture to the team’s stack for the first time.

– Shipped **3** cross-platform mobile apps in Xamarin Native and Xamarin Forms (iOS + Android from a shared C# codebase) - becoming the team’s primary mobile delivery resource.

Junior .NET Developer

Aug 2015 – March 2016

CUBE.ITG · Wrocław, Poland

- Contributed to a commercial ASP.NET MVC 4.0 platform for **Santander Group** (UK regulated finance) - large legacy codebase under strict delivery and regulatory quality standards.

Approach

I'm **pragmatic** with a strong **problem-solving mindset** - I focus on the actual problem behind a requirement, weigh trade-offs openly, and pick the **simplest solution** that holds up under real load instead of chasing the most elegant one on paper.

When designing architecture or scoping a new application, I reach for **event storming** on a **Miro board** with domain experts to map the **real domain model** before committing to a structure.

Having worked directly with clients for years, I factor **business constraints** and **delivery risk** into every architectural decision, not as an afterthought.

I use **Claude Code** daily to tighten the loop between design and working code, letting me **prototype, refactor, and validate** faster without adding overhead.

KEY PROJECTS

StockTrack - Petroleum Stock & Trade Management Platform · Yameo

2024 – Present

Enterprise platform tracking **petroleum stock across terminals, vessels and onshore/offshore deliveries** - nominations, lien transfers, swaps, product conversions and settlement workflows. Modular **.NET 8** with **GraphQL read-side / REST command-side**, hybrid PostgreSQL + MongoDB, SignalR, deployed on **AKS via ArgoCD GitOps** with full OpenTelemetry observability.

Role: Senior developer and client-facing engineer - leading domain analysis with stakeholders and translating trade/finance requirements into delivery scope alongside hands-on implementation.

Nexus - Logistics Platform · Ecoson / Darling Ingredients

2020 – 2024

Modular monolith with **4 modules**: fleet management, route optimization, driver tracking & geofencing, ERP integration (Odoo). Handles **~100 active vehicles/drivers daily** across several countries with SSO (OAuth 2.0 / OIDC, Identity Server 4), automated PDF/Excel reporting and trip cost optimization.

Role: Solution architect and team lead (5 engineers). Defined scope and technical standards, acted as product owner in early phase - delivered on schedule within budget.

PurpleApp - Employee Management & Operations Platform

2023 – 2024

Multipurpose enterprise platform: mobile task assignment, time & activity tracking, building floor plans, asset flow, integrated sales/purchase orders, and ERP integration. **Domain designed end-to-end via event storming** before a single line of code was written.

Role: Led domain design sessions, defined RESTful API structure, and shaped UI/UX for the frontend layer.

Axon - Warehouse Management System

2018 – 2019

Comprehensive WMS with asset management, full traceability, granular user-role policies, and extensive automated test coverage across web, API, and mobile layers.

Role: Core developer (one of two) - delivered mobile app, REST API, and web frontend with **comprehensive xUnit coverage** from the ground up.
