
Roman Dużyński

SENIOR FULL-STACK .NET ENGINEER

romduz@gmail.com · +48 795 757 715 · linkedin.com/in/roman-dużyński · hokage.pl

Opole, Poland · Remote · CET · EU citizen

SKILLS

BACKEND

.NET 8 · C# · ASP.NET Core · Minimal APIs · REST API · Entity Framework · Dapper · MediatR · RabbitMQ · SignalR · Identity Server · Polly · Hangfire · Serilog / Seq · MQTT · Swagger / OpenAPI · GraphQL · HotChocolate

ARCHITECTURE

CQRS · DDD · Clean Architecture · Modular Monolith · Microservices · SOLID · TDD / BDD · xUnit

FRONTEND

Angular · RxJS · NgRx / NgXs · React · Blazor · TypeScript · Tailwind · PrimeNG

CLOUD & DEVOPS

Azure · Kubernetes / AKS · Docker · Azure DevOps · Azure Pipelines · Jenkins · IIS · App Center · Blob Storage · Key Vault

DATABASES

MS SQL · PostgreSQL · Redis · Elasticsearch · SQLite

AI

Claude · Claude Code · superpowers

TESTING & QUALITY

SpecFlow · Playwright · SonarQube

MOBILE

React Native · Xamarin Forms · Xamarin Native · MVVM Cross

LANGUAGES

PROFILE

I founded an engineering branch from zero, grew it to **5 people**, and architected a logistics platform for Darling Ingredients from event storming sessions through to production — that is what **10 years** of full-stack .NET looks like in practice. Senior developer across oil & gas, logistics, warehousing, and financial services; experienced technical liaison who translates client requirements directly into architecture decisions. After six years building and leading a team, I chose to return to hands-on engineering — that is where I do my best work and where I want to stay.

WORK EXPERIENCE

Senior Software Engineer

Sept 2024 – Present

Yameo · Gdańsk, Poland

- Contributing to **StockTrack** — an offshore energy supply chain platform handling vessel operations, real-time asset tracking, stock trades, and analytics; deployed on Azure-hosted Kubernetes (AKS) with Jenkins CI/CD.
- Serving as **primary technical liaison to energy sector clients** — translating business requirements directly into architecture decisions in a full-ownership model with no intermediary PM layer — working within two-week Scrum sprints with backlog refinement handled directly with the client.
- Delivered a Blazor-based internal tooling application, expanding team frontend capability beyond the primary Angular stack.
- Modernized the team's BDD workflow using **Claude** and **superpowers** to accelerate **SpecFlow** step generation.

Team Lead Software Developer

Nov 2018 – Sept 2024

Porta Capena Sp. z o.o. · Opole, Poland

- With no local engineering presence, founded Porta Capena's Opole branch — hired and onboarded **5 engineers**, defined technical standards and workflows, growing it into the company's primary delivery unit.
- Served as architect and initial product owner on **Nexus** (logistics platform for Ecoson / Darling Ingredients) — applied DDD across 3 modules, navigated a mid-project scope change by renegotiating priorities directly with the client, and delivered in **3 years** on schedule and within budget.
- Owned Azure DevOps end-to-end: CI/CD pipelines, boards, App Center deployments, and cloud infrastructure across multiple active projects simultaneously.
- Established team logging and monitoring standards using Serilog/Seq and Application Insights, giving the team production visibility across all live projects simultaneously.

Approach

Before writing any code, I run event storming sessions with domain experts to surface the actual domain model — not just the stated requirements.

I default to a modular monolith and add distribution only when team size or operational load makes it necessary.

Having worked directly with clients for years, I factor business constraints and delivery risk into every architectural decision, not as an afterthought.

I use Claude Code to tighten the loop between design and working code — it lets me prototype and validate faster without adding overhead.

I care about making the right call, shipping it cleanly, and leaving the codebase in better shape than I found it.

KEY PROJECTS

Nexus — Logistics Platform · Ecoson / Darling Ingredients

2020 – 2024

Modular monolith with **3 DDD modules**: fleet management, route optimization, and driver tracking & analytics. Handles around **100 active vehicles and drivers daily** across several countries, with SSO across web and mobile using OAuth 2.0 / OpenID Connect (Identity Server 4), automated PDF/Excel reporting, and trip cost optimization.

Role: Solution architect and team lead (5 engineers). Defined scope and technical standards, acted as product owner in early phase, facilitated stakeholder communication — delivered on schedule within budget.

.NET Core 3.1 · Angular · RxJS · Xamarin Forms 5 · MS SQL · Identity Server 4 · SignalR · RabbitMQ · Elasticsearch · Redis · Docker · Azure CI/CD · PrimeNG · xUnit

PurpleApp — Employee Management & Operations Platform

2023 – 2024

Multipurpose enterprise platform: mobile task assignment, time & activity tracking, building floor plans, asset flow, integrated sales/purchase orders, and ERP integration. **Domain designed end-to-end via event storming** before a single line of code was written.

Role: Led domain design sessions, defined RESTful API structure, and shaped UI/UX for the frontend layer.

.NET 6 · ReactJS · React Native · EF Core 6 · MediatR · CQRS · JWT · PrimeReact · Hangfire · Azure Blob Storage · Dapper · Azure DevOps

Axon — Warehouse Management System

2018 – 2019

Comprehensive WMS with asset management, full traceability, granular user-role policies, and extensive automated test coverage across web, API, and mobile layers.

Role: Core developer (one of two) — delivered mobile app, REST API, and web frontend with **comprehensive xUnit coverage** from the ground up.

.NET Core 2.2 · Angular · Xamarin Native · MS SQL · REST API · xUnit · IIS · Topshelf
